# **ANR HEARTLAND PROJECT:**

# A Strategic Investment in Wisconsin's Energy Future

In response to evolving utility reliability regulations and customer demand growth in the Midwest, TC Energy's ANR Pipeline Company has proposed the Heartland Project. The Heartland Project will require approximately 70 miles of new and replacement pipeline, modifications to existing compressor stations, installation of new compressor stations and expansion of meter stations across Illinois and Wisconsin.

### **Project Overview in Wisconsin**

Spanning much of eastern Wisconsin, the ANR Heartland Project will invest \$302 million in the installation of approximately 9.5 miles of pipeline and new construction of compressor and meter stations. Key installations include:

- Enhanced Pipeline Capacity: Upgrades in Waukesha and Sheboygan Counties will expand pipeline capacity to meet rising customer energy demands.
- New Compressor and Meter Stations: Construction of a new compressor station in Brown County and expansion of meter stations in Racine, Sheboygan, and Winnebago Counties will boost delivery reliability and distribution efficiency.

### **Economic Benefits to Wisconsin Economy**

The Heartland Project promises substantial economic and job-related benefits:

- Job Creation: Throughout the project's lifespan, an estimated 1,411 jobs will be created in Wisconsin. This estimate includes both direct jobs such as equipment operation, engineering, electric work, welding and logistics, as well as indirect jobs due to new demand for local goods and services.
- Economic Impact: ANR's investments are poised to contribute \$632 million to Wisconsin's economy, including generating \$105.7 million in labor income by 2028, directly supporting local economies.
- Tax Revenue: The project will produce approximately \$29.9 million in new tax revenues across local, state, and federal levels.

#### **Benefits to Local Economies**

County	Total Jobs (Direct & Indirect)	Direct Impact*	Total Economic Impact	County Tax Revenue	State Tax Revenue
Brown	207	\$61,385,826	\$76,591,708	\$27,140	\$226,544
Racine	33	\$4,900,194	\$6,835,554	\$4,249	\$35,466
Sheboygan	722	\$42,570,352	\$104,281,028	\$56,616	\$472,580
Waukesha	243	\$25,740,891	\$33,925,954	\$56,445	\$471,159
Winnebago	25	\$4,887,206	\$6,702,451	\$2,958	\$24,690

<sup>\*</sup>Direct Impact includes sales and output and was calculated independently from direct project expenditures as described above.

The \$302 million investment in Wisconsin includes significant capital and personnel expenses in individual counties. Spending on materials, construction, and allied services will create a strong ripple effect through indirect job creation and increased local business operations.

For example, wages paid to workers and contractors are then spent on rent, groceries and other household expenditures, and ultimately benefit Wisconsin businesses and workers. The new state and county tax revenue also means additional support for the public services depended on by Wisconsin families.

### **Community and Environmental Benefits**

- Enhanced Reliability and Safety: Modernizing infrastructure bolsters the reliability of our energy supply, particularly against extreme weather events, while minimizing the environmental impact.
- Support for Local Development: Increased annual tax contributions will aid the growth of essential community services and infrastructure development within communities, enhancing the quality of life and economic vitality.
- Transition to Clean Energy: By supporting the retirement of coal-fired operations, the Heartland Project supports Wisconsin's renewable energy goals and reduces the state's reliance on high-emission energy sources. The use of natural gas pipelines results in fewer emissions compared to alternative transportation methods.

The ANR Heartland Project not only represents a forward-thinking approach to energy management but also highlights a commitment to local economic growth, community development, and environmental stewardship, providing long-lasting benefits to Wisconsin residents.
