GEOGRAPHICAL RESPONSE PLAN

KEYSTONE PIPELINE SYSTEM

FOR TRANSCANADA PIPELINE USE ONLY Not controlled when printed.

Updated 2021

CARBERRY (MB) AREA

RESPONSE SUMMARY

This Geographic Emergency Response Plan (GRP) is a component of the Keystone Emergency Response Plan (ERP). Information herein does not supersede any component of the ERP.

The purpose of this plan is to facilitate expedited and efficient emergency response operations to protect people the environment within the Assiniboine Delta Aquifer.

This plan should be referenced as a guide only during emergency response. All actions should be modified to meet the demands of a specific incident. This plan does not direct actions, but merely serves as a resource to responders.

All responders using this plan should ensure the TransCanada First Responder Checklist is completed before implementing this plan.

Recommendations in this GRP may be applied to releases from TransCanada's Keystone Pipeline in the Rapid City Section RPDCT+25 1 to the Wellwood Section WELWD+23 2.

The Carberry Geographic Response Plan is centered on the Assiniboine Delta Aquifer where the TransCanada Keystone Pipeline crosses. The ADA is a freshwater bearing deposit of sand and gravel lying below 1500 square mile area centered around Carberry. The aquifer is approx. 50 miles across and up to 140ft deep; it has an average saturated thickness of 45ft and a max of 100ft. The depth from ground surface to the aquifers water table ranges from zero to a maximum of 70ft. The ADA contains approximately 12,000,000 acre-feet of water and approximately 2,200 urban and 7,400 rural residents live in this area and all depend on the aquifer for the water supply.

The ADA is unconfined by any overlying impermeable layers. The west side of the aquifer rests on a glacial till, the remainder of the aquifer rests on a layer of silt and clay covering the till. A significant portion of this area is crown land and is kept in its natural condition. The soils are coarsely textured and allow the majority of the precipitation to infiltrate into the ground. The majority of runoff from waterways in this area comes from the aquifer via springs located in their channels and banks where it's eroded below the water table. The municipalities within this GRP are Langford, North Cypress and North Norfolk.

The Keystone Pipeline intersects 38.30km of the ADA through the four sub-basins at the northern portion of the ADA (Upper Whitemud East, Upper Whitemud West, Lower Whitemud East and Pine Creek North). This portion of the pipeline lays horizontally at 0.8-1.2m below grade, with the exception of all crossings (i.e. Roads, ditches, creeks, utilities etc.) where the depth to cover will increase to 2m below grade.

Culturally and environmentally sensitive receptors need to be protected and preserved in the unlikely event of a release. These receptors have been identified through publically available data from both federal and provincial agencies within a 500m buffer of each source and tactical control points. The Pine Creek/Whitemud River Tactical Plans include a list of all environmental and cultural receptors for each control point. The identified receptors include aquifers, water wells, historic sites, environmentally sensitive areas, aboriginal reserves, soil type, drainage pathway and species of concern.

Below is a table showing all species of concern for both federal and provincial status. Each species are ranked as endangered, extirpated, threatened, of special concern or not listed. The definitions of these classifications are as follows:

Endangered: A wildlife species facing imminent extirpation or extinction

Extirpated: A wildlife species that no longer exists in the wild in Canada, but exists elsewhere

Threatened: A wildlife species that is likely to become endangered if nothing is done to reverse the factors leading to its extirpation or extinction

Special concern: A species is of special concern because of characteristics that make it particularly sensitive to human activities or natural events.

Not listed: A species for which there is insufficient scientific information to support status designation.

Wildlife Species Mammals	SARA Status	Provincial Status	Ecoregion
Mule or Black-tailed Deer	notlisted	threatened	lake Manitoba plain/ Aspen Parkland
Birds			
Burrowing Owl	endangered	endangered	lake Manitoba plain/ Aspen Parkland
